

Partner for Promotion

Purpose

Partner for Promotion is a collaboration of The Ohio State University College of Pharmacy faculty and students with community pharmacists to provide training and guidance for implementing expanded patient care services that improve medication-related health and wellness in the community. The program partners and mentors students and preceptors in a collaborative environment to create and implement expanded patient care services in community-based pharmacy settings such as community pharmacies.

Impact

Since its inception in 2005, over 150 students and 75 pharmacists have engaged with the program in 16 Ohio counties and two other states.

Services have been provided to thousands of patients to enhance safe and effective medication use including wellness screenings, immunizations, diabetes management, transitions of care, and comprehensive medication reviews.

The Partner for Promotion model has been licensed and shared with six colleges of pharmacy across the U.S. who are currently offering the program.
